Visit Management

Security operations

Custom software

Who we are

VisionFlow Limited is a software and technology company. We turn operational needs into reliable digital systems — from custom software to the platforms we operate today.

MISSION

Deliver practical software that solves real operational problems — from discovery and design through build, launch, and ongoing support.

VISION

Be a trusted software partner across East Africa and beyond — known for dependable systems, clear delivery, and products that scale with the businesses that use them.

Core values

Clarity

Plain language on scope and outcomes

Reliability

Systems that hold up in real operations

Fit for purpose

Software matches how people work

Accountability

Traceable records where needed

Partnership

Support after launch, not only delivery

Services and products at a glance

This profile uses two product short names. On first mention they are written in full:

Short name	Full name	Focus
VMS	Visitor Management System	Visit Management
SWMS	Security Workflow Management System	Guard & site operations

Alongside these products, VisionFlow Limited builds custom software for organizations that need a system designed around their own process.

Offering	Type	Status	Who it serves
Custom software delivery	Service	Available	Any defined requirement
Visitor Management System (VMS)	Product	Live	Reception & property teams
Security Workflow Management System (SWMS)	Product	Live	Security providers
Implementation & support	Service	Available	All clients

Custom software lifecycle

Stage	What we deliver
Requirements & design	Capture needs, map workflows, define scope
Build	Web, mobile, and backend systems
Integration	Connect with tools already in use
Deploy & support	Launch, train, and maintain

The next two pages describe each live product once — without repeating this overview.

Visit Management

The Visitor Management System (VMS) is VisionFlow's Visit Management product. It manages the full visit: who arrived, why they are here, who they are meeting, and when they leave — so reception stays in control and every visit has a clear record.

How a visit works

Step	What happens during the visit
1. Arrive	The guest reaches reception or the check-in point
2. Register	Details, purpose of visit, and host are captured
3. Badge	A Quick Response (QR) badge links to the visit record
4. Meet host	The guest is directed to the right person or area
5. Check out	The visit is closed and kept for later review

What Visit Management covers

- Guests, deliveries, contractors, and staff-like visits in one guided flow
- Hosts know who is coming and the purpose of the visit
- On-site visibility by property while visits are open
- Visit history for operations and compliance reviews

Guard and site operations

The Security Workflow Management System (SWMS) is the operational platform for security providers. It connects what happens on site — attendance, patrols, and incidents — with what managers and clients need to see afterward.

What security teams use it for

- Guard check-in and check-out at posts
- Patrol routes and checkpoint monitoring
- Incident records with notes and photos
- Daily occurrence-style reporting for supervisors and clients
- Shift planning and clearer client visibility of site activity

How the two products differ

Visitor Management System (VMS) = Visit Management for reception and properties.

Security Workflow Management System (SWMS) = guard, patrol, and site operations for security companies.

Both can be deployed alone or alongside custom software from VisionFlow Limited.

Who we serve and how we stand out

Setting	Typical use
Corporate offices & business parks	Visit Management and multi-site control
Estates & gated properties	Controlled visits at the front desk
Schools, campuses, hospitals & clinics	Structured visit handling
Co-working spaces	Shared-property Visit Management
Security service companies	Security Workflow Management System (SWMS)

Buyer	Best fit
Property & facility operators	Visitor Management System (VMS)
Enterprises & institutions	VMS, often with custom integrations
Security companies	Security Workflow Management System (SWMS)
Teams with a unique process	Custom software delivery

Advantage	In practice
Visit-first product design	Reception workflows built around real visits
Products and custom software	Use our live platforms, or ask us to build a system for you
Full delivery lifecycle	Design, build, launch, and support
East Africa context	Aligned to how local teams operate

Leadership profiles, client references, certifications, and financial figures are available to qualified parties on request or under a Non-Disclosure Agreement (NDA).
